**DETAILED ACTION**

**Restriction/Election**

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 45-69, drawn to a method of assaying a sample for an activity comprising nucleic acids, classified in class 435, subclass 6.

II. Claims 45-76, drawn to a method of assaying a sample for an activity comprising peptides, and enzymes, classified in class 435, subclass 7.1.

III. Claim 77-80, drawn to a kit for measuring the activity of an enzyme, classified in class 536, subclass 22.1.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the methods of Group I and II have different modes of operation with different end results. For instance the method of Group I results in detecting the activity of a nucleic acid whereas the method of Group II results in detection of the activity of a peptide or an enzyme.

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the methods of Group I and III have different modes of operation with different end results.

Inventions III and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the

product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product of Group III can be used in a materially different process such as purification assays or therapeutic assays.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter, restriction for examination purposes as indicated is proper.
4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
